

Installation Instructions for FM11

Attach the fire extinguisher bracket to the mount with the supplied small screws, washers and nuts. Put the curved end of the fire extinguisher bracket (that holds the nozzle end) so that it is closer to the end of the bracket.

Note: A thread lock compound such as Loctite is a fantastic idea here.

Move the seat all of the way back to access the seats front bolts and remove the plastic cover over the bolts, then remove the bolts.

Place the spacers under the mount and secure with the new bolts.

Attach your fire extinguisher.

It is recommended that you also use a Velcro strap as a secondary measure to secure the fire extinguisher
