

Installation Instructions for FM14

Attach the fire extinguisher bracket to the mount with the supplied small screws, washers and nuts. Depending on which side you are installing the mount on, put the curved end of the fire extinguisher bracket (that holds the sprayer end) toward the CENTER of the vehicle.

Note: A thread lock compound such as Loctite is a fantastic idea here.

Move the seat all of the way back to access the seats front bolts and remove them.

Place the spacers under the mount and secure with the large bolts and washers as shown.

The larger bolts and spacers will be used nearest the console (center of vehicle) and the shorter bolt and spacer nearest the door.
